## LIPODISSOLVE

Lipodissolve is a new and exciting procedure in the USA for body sculpting and to treat specific areas of fat deposits without surgery and with very minimal if any downtime. Lipodissolve have been used in Europe and South America for many years and it is supported by numerous clinical studies and research.

Lipodissolve consists of injections directly in the fat layer with two different medications: Phosphatidylcholine (PPC) and Deoxycholate. PPC is a naturally occurring substance within the body that comprises up to 60% of the cell membranes, is a component of the bile and is responsible for emulsifying the fat we consume in our diet. The PPC used in the fat reducing formulas is derived from the soybean Lecithin. Deoxycholate is a bile salt that functions to make PPC soluble in water.

BEFORE

AFTER

Lipodissolve is very safe when injected in appropriate candidates by a trained practitioner, preferably a Licensed Physician. PPC has both Lipolytic (reduces size of fat cells) and Lipoclastic (destroys fat cells) actions, so results are permanent as the human body does not regenerate fat cells.

## COMMON QUESTIONS

**Q. Are the results permanent?**

A. Yes, each person is born with a certain fixed number of fat cells, lipodissolve with its Lipoclastic action (destroy fat cells permanently) will reduce the number of fat cells in the treated area and it will not regenerate. If a person gains weight, the fat cells located in the NON-TREATED areas will get larger, however, the area that was treated will remain unchanged.

**Q. Why should I choose Lipodissolve rather than Liposuction?**

A. Lipodissolve is a non-surgical option to treat localized fat deposits and for body sculpting, so downtime if any is minimal, result in the treated area are permanent like liposuction, and complications are minimal, also cost is less.

**Q. How does lipodissolve work?**

A. Lipodissolve works by destroying fat cells permanently, and it also decreases the size of fat cells. Lipodissolve formulations are directly injected in the fat layer, causing destruction of fat cells, the fat cells absorb the medications (Phosphatidylcholine and Deoxycholate), causing the destruction of the fat cells, for a permanent results.

**Q. What are the complications of lipodissolve?**

A. Lipodissolve is a very safe procedure in the hands of a trained physician. As with any procedure involving injections, complications are possibilities of infection, swelling, bruising and tenderness in the area treated, there are no systemic or generalized complications or side effects. Swelling and bruising may last up to three weeks, but will fully resolve.

**Q. Is lipodissolve painful?**

A. There is localized discomfort and minimal pain in the area treated. Also after the medication is injected there is a transient burning and or itching sensation, using Ice locally will help reduce any discomfort.

**Q. How long does each treatment take?**

A. Usually each treatment session last less than an hour, that is why some people call it "Lunchtime Lipo."

**Q. Who will be performing my treatment?**

A. At Eterna MD your treatment will ALWAYS be performed by one of our licensed PHYSICIANS, who have been extensively trained on Lipodissolve techniques in Europe, South America and the US.

## DR. CARLOS MERCADO, MD

Dr Carlos Mercado, MD is the founder of LIPOBLASTMD. He has extensive training in the innovative procedure called lipodissolve. Dr Mercado has treated many patients obtaining results compatible to "smartlipo."

He has treated different areas such as the neck, face, abdomen, and legs. His philosophy has been to treat the patient inside and outside. He has developed many protocols for fat reduction. He uses combination therapy to eliminate unwanted fat.

His philosophy is to do a clinical evaluation first and then determine what it is the best treatment for the patient. He spends the majority of his time during the consultation in doing a comprehensive medical evaluation to make sure the patient is a candidate and as well as to set-up expectations.

Trained in Europe in Anti-Aging Medicine, Dr. Mercado has designed a special Weight Loss Program that is unique because it uses DNA testing to address the causes of weight gain and prevention of diseases such as Diabetes, Coronary Heart Disease and others and address all frontiers of weight reduction.

## DR. MARA DE LA VEGA, MD

Dr. De La Vega has undergone extensive training in Paris, France and has focused on women's health issues throughout her professional career. Dr. De La Vega has been a family practitioner since 1995 and has been awarded the designation of "Ethic Physician" by the American College of Physicians.

Dr. De La Vega is also a popular speaker on many women's health issues including body image issues, exercise, menopause and holds a special interest in bio-identical hormone replacement.
